San Francisco, CA | (650) 278-1269 | ruchirarl07@gmail.com | [linkedin.com/in/ruchira-lokhande](https://www.linkedin.com/in/ruchira-lokhande) | ruchirarl.github.io

SUMMARY

Data Analyst with experience building SQL and Python pipelines, dbt data models, and Tableau dashboards that drive business decisions at scale. Delivered a 10% client conversion lift by rebuilding a broken intake funnel from scratch, and automated 80+ analyst hours monthly through Tableau KPI pipelines.

SKILLS & CERTIFICATIONS

Languages & Query: SQL (CTEs, Window Functions), Python (pandas, NumPy, scikit-learn), R

Data & Pipelines: dbt, ETL/ELT, Informatica, Pub/Sub, Data Modeling, Data Validation

BI & Visualization: Tableau, Power BI, Looker, Advanced Excel | **Tools:** Git, GitHub, Jupyter, dbt Cloud

Cloud: GCP (BigQuery, Pub/Sub, BigQuery ML), AWS (S3 · Certified CCP), Snowflake

Analytics Methods: A/B Testing, Hypothesis Testing, Regression Analysis, Cohort & Retention, Funnel Analysis, Forecasting, Segmentation, Statistical Analysis, Data Storytelling

Certifications: AWS Certified Cloud Practitioner | Tableau Certified Desktop Specialist | Building Agentic AI Apps with LLMs (NVIDIA)

EXPERIENCE

De Fonte Law | Data Analyst

San Francisco, CA | September 2024 - June 2025

- Rebuilt end-to-end intake funnel in Python and SQL by feature-engineering 5+ years of CRM data, applied funnel analysis to pinpoint 3 high-drop-off stages, and delivered prioritized recommendations, driving a 10% increase in client conversion rate.
- Automated KPI reporting pipeline in Tableau by replacing manual Excel workflows across conversion, CAC, response time, and throughput, eliminated 80+ analyst hours/month, enabling same-day leadership decisions.
- Uncovered a 20% time-per-matter variance by analyzing attorney time-tracking data across all active matters in Python, delivered a staffing reallocation model that reduced matter backlog by 15%, and improved resource utilization.
- Standardized KPI definitions across 3 business units in Tableau and SQL, leading 12+ cross-functional sessions to collapse conflicting metric definitions, cutting reporting discrepancy incidents by 30%.
- Grew organic traffic 30% by running Python-driven CTR analysis across 10+ competitors, surfaced 15 keyword gaps in a Tableau benchmarking dashboard, and delivered a targeted content strategy.

Deloitte USI | Data Analyst

Bengaluru, India | January 2024 - May 2024

- Integrated 3+ enterprise data sources into a unified Snowflake schema using Informatica, applied 20+ transformation rules, and validated full-load row counts end-to-end, ensuring zero-defect data delivery for downstream reporting.
- Built and optimized 15+ Informatica ETL workflows by redesigning staging-to-target transformation logic, reduced average pipeline execution time by 20%, and improved data refresh reliability across all reporting layers.
- Developed a Python data validation suite across 20K+ records, automated anomaly detection, null-value checks, and duplicate flagging across 5 validation dimensions, reducing data quality errors reaching dashboards by an estimated 35%.
- Designed advanced SQL data models using CTEs, window functions, and multi-table joins across 3+ datasets, produced Snowflake-aligned analytical tables, reducing ad hoc query turnaround time by ~40% for business reporting stakeholders.

AI4M Technology Pvt. Ltd. | Business Analyst Intern

Pune, India | January 2023 - July 2023

- Led ML model selection for coating weight prediction by benchmarking 4 algorithms (KNN, XGBoost, Random Forest, Decision Tree), and drove architectural transition to PyTorch deep learning, achieving AUC 0.863 on live spectroscopic data.
- Engineered CV training datasets across 10+ experimental setups using CVAT, producing annotation-validated, ML-ready datasets that enabled a 10% improvement in defect detection accuracy in metal pipe manufacturing inspection.
- Designed 3 KPI reporting frameworks (lot-wise, daily, shift-wise) to track defect rate and coating weight, giving plant operators structured quality-control visibility and replacing ad-hoc manual logs across 2 production facilities.
- Authored FRS and FDS documents for 4 concurrent AI/CV products, translated client manufacturing requirements into engineering-ready specs, reducing mid-sprint scope changes by an estimated 60% across all workstreams.

EDUCATION

University of California, Davis | Master of Science, Business Analytics (3.6/4.0)

San Francisco, CA | August 2024 - August 2025

- MSBA Fellowship Scholar | Beta Gamma Sigma Honor Society (Top 20%)

Symbiosis Institute of Technology | Bachelor of Technology, Information Technology (3.6/4.0)

Pune, India | July 2019 - June 2023

- Honors in Artificial Intelligence and Machine Learning

PROJECTS

ESynopsis - E-commerce Analytics Pipeline & Forecasting | Python · GCP · Pub/Sub · BigQuery · dbt · BigQuery ML · Tableau

- Architected a serverless real-time data pipeline on GCP by building a Python generator simulating complex user journeys, streaming live events through Pub/Sub directly into BigQuery, and backfilling 90 days of historical data.
- Transformed raw events into 5 production dbt models on an hourly refresh schedule; deployed daily-retrained BigQuery ML forecast models surfaced in a Tableau dashboard tracking the full Viewed-to-Carted-to-Purchased funnel and 30-day sales.

EquiTrack - Quantitative Portfolio Analytics Platform | Python · dbt · DuckDB · scikit-learn · Tableau

- Built an automated quantitative data pipeline by ingesting live stock prices and FRED macroeconomic indicators via Python, modeling them through a dbt multi-layer architecture (staging to marts) that computes Sharpe ratio, Beta, 30-day volatility, and sector correlations, and delivering results into a 9-chart Tableau dashboard for portfolio risk and return analysis.
- Trained a next-day stock return prediction model using scikit-learn with TimeSeriesSplit cross-validation, and enabled forward-looking portfolio analysis across 5 sectors alongside historical performance KPIs.
